

Manufacturer's Declaration

We, KRONOTEX GmbH & Co. KG, hereby confirm that all KRONOTEX laminate floors exhibit the value required for suitability for underfloor heating, namely an overall heat transfer coefficient (u-value) of $R \leq 0.15 \text{ (m}^2 \cdot \text{K)/W}$ as indicated in the guideline for the use of floor coverings over underfloor heating of the German Federal Association of Surface Heating and Surface Cooling (Bundesverband Flächenheizungen und Flächenkühlungen e.V.). The table below gives the values according to DIN EN 12667 for the different nominal thicknesses of KRONOTEX laminate floors.

Nominal thickness	R
[mm]	[(m ² * K)/W]
6	0.05
7	0.05
8	0.06
10	0.07
12	0.09
8 FS	0.07
12 FS	0.10

(FS= products that include a footfall sound insulation underlay)
